## IN THE CLAIMS

Please amend the claims as follows:

- 1. (original) A method of decreasing the dynamic range of a signal comprising the steps of:
- determining a property of the signal (c),
- determining a limitation parameter (s) based on the property of the signal,
- limiting the signal by means of the limitation parameter,
- clipping the limited signal.
- 2. (original) The method of claim 1 further comprising the following steps for determining the property of the signal:
- windowing of the signal,
- determining of the ratio of the signal maximum within the window and the signal RMS  $\,$

value within the window.

- 3. (original) The method of claim 2, whereby no clipping is performed when the ratio is below a predefined threshold.
- 4. (currently amended) The method of claims 2 or 3 claim 2 further comprising:

- comparing the ratio to the threshold,
- determining of the limitation parameter independently from the ratio if the ratio is below the threshold.
- 5. (currently amended) The method of claim 3—or 4, whereby the threshold is substantially equal to or above the ratio obtained for a sinusoid signal.
- 6. (currently amended) The method of anyone of the preceding claims 2 to 5claim 2, whereby the ratio is modified by a correction factor (K) and the limitation parameter is determined based on the modified ratio.
- 7. (currently amended) The method of anyone of the preceding claims 1 to 6 claim 1 further comprising the following steps for determining the limitation parameter based on the property:
- determining of the signal maximum within the window,
- attenuation of the signal maximum in proportion to the ratio,
- filtering of the attenuated maximum,
- calculation of the limitation parameter by dividing the maximum (M) of the dynamic range

by the filtered maximum, if the filtered maximum is above the . maximum of the dynamic range.

- 8. (currently amended) An electronic circuit comprising means for performing a method in accordance with anyone of the preceding elaims 1 to 7 claim 1.
- 9. (original) The electronic circuit of claim 8, whereby the electronic circuit is an audio circuit.
- 10. (currently amended) A computer program for performing a method in accordance with anyone of the preceding claims 1 to 7claim 1.
